INTERIOR SCONCES

- Standard finish on sconces is “old tin”, a Deep Landing Workshop concocted recipe to emulate that “left in the barn too long” feel.
- Mirrored sconces come with silvered hand made glass mirrors. They have a great look.
- When considering our sconces, measure the electrical box where you intend to place them. Many of our sconces were designed when the standard electrical box for sconces was 4” x 2 1/2” mounted vertically. Life is not so simple anymore, and if the sconce doesn’t cover the electrical box, we can supply you with a thin metal cover plate that can be painted to match the wall.

CHANDELIERS

CHANDELIER BASICS

Prices include

1. 24" of hook for wooden chandeliers
2. 36" of rod for metal chandeliers OR 24" of solid brass chain
3. 24" of tin chain for cone chandeliers
4. ceiling canopy and mounting hardware and bulbs

ARM SPREAD, when given, is for the arm spread shown in a particular photo. Arm spread is a highly variable feature on our chandeliers and can be changed, up to 36", at no additional charge.

WOODEN CHANDELIER BASICS

1. Our solid body chandeliers have wooden center spindles. The height column gives the height of the wooden spindle not including the ring and hook
2. Poplar wood painted to your specifications is standard
3. W/C means that the price given is for a walnut or cherry spindle. We carry solid cherry and walnut in sizes up to 5" in diameter.

METAL CHANDELIER BASICS

1. Standard finish is our "wrought-iron". See Finishes for a description.
2. The patented hook and ring does not always come standard with these chandeliers, but is available at additional cost.
3. A halogen down light is available for many of these chandeliers.

FINISHES -WOODEN CHANDELIERS

1. Painted poplar spindle to your specification

2. "Wrought-iron" is standard on metal parts.
3. Old pewter, the same material as "wrought-iron" but looks exactly like antique pewter, can be specified for metal parts at no additional charge.
4. Walnut or cherry spindles are available for smaller wood turned chandeliers. Add 30%
5. Faux Finishes - Old iron, faux bronze, faux verdigris, faux rust are the most common . Variations and permutations are infinite. Add \$380
6. Gilding, 23k gold leaf, priced accordingly
7. Decorative carving priced accordingly
8. Decorative painting, priced accordingly

FINISHES - METAL CHANDELIERS

1. Standard finish is "wrought-iron", an oxidized lead tin alloy, antiqued to duplicate the look of old wrought-iron. No rust, no fuss, and no flat black.
2. Old pewter, same material as "wrought-iron" but looks exactly like antique pewter. Can be specified at no additional charge.

STANDARD FINISHES FOR EXTERIOR FIXTURES

light lead coat copper

dark lead coat copper

antique copper

Lead coat copper finishes become lighter over time in an exterior environment.

Antique copper becomes darker.

STANDARD FINISHES FOR INTERIOR FIXTURES

old tin (wall sconces and tin chandeliers)

light or dark lead coat copper (some wall sconces)

wrought iron or old pewter (l-100 series lanterns and metal chandeliers)

paint (on wood chandelier spindles)

FINISH DESCRIPTIONS

WROUGHT IRON FINISH

This is used primarily for interior fixtures. In reality this is a tin/lead alloy on copper or brass. We do the plating in house. Most round or square stock, such as chandelier arms and suspension rods are done this way. The L-100 series lanterns are also done this way, because we wanted to create a heavier wrought look, rather than the sheet iron or tin look. We use lead coat copper for the sheet iron look in exterior applications. We use a plated steel for our old tin interior applications.

The tin/lead alloy is oxidized and waxed to give the wrought iron look. And it won't rust.

Where structural strength is required, such as heavy iron mounting brackets for wall lanterns, steel is used, and finished using our faux iron. This is a textured oil paint finish. It is hand applied and built up. It stands up very well, even in a harsh exterior environment.

OLD TIN

For interior fixtures only. We use a plated steel that is aged (oxidized).**OLD PEWTER**

For interior fixtures only. It loses its luster in exterior applications. We start with the same tin/alloy on copper or brass as the wrought iron, but finish it differently. Some of our interior sconces can be given an old pewter finish using lead coat copper. This is a darker gray due to the 100% lead content.

LEAD COAT COPPER

This is copper that has been hot dipped in molten lead. We buy this product in sheets, and use it to make our exterior fixtures, and some interior sconces. It has a more mottled appearance than the wrought iron finish. It can be finished as dark brown/black or light, with a grayer tone.

FAUX IRON and other paint based textured finishes

This is a finish that we use as standard on our steel exterior mounting brackets. It requires a 25% upcharge when used on the lanterns themselves, because the heavy texturing has to be applied carefully to keep it from interfering with the door or glass channels.

OPTIONAL FINISHES

Copper Verdigris - add 10%

Dark Copper Verdigris (also called Dark Antique Copper) - add 5%

Antique Brass (also called Old Brass) - add 15%

Polished Antique Brass - add 25%

Not recommended for exterior fixtures. In interior environments it will develop a golden tone over a period of 1-2 years.

unfinished satin copper, to go to weather - no up charge
unfinished satin brass, to go to weather - add 10%
painted to match your swatch - add 15%
Walnut or cherry for wood chandelier spindles (some size restrictions) - add 30%
Graining or marbling for wood chandelier spindles - add 20%
textured faux finish, iron, bronze, rust, or verdigris - add 25%

ORDERING

Our sales are to the trade. Order through your interior designer or architect.

In the Washington DC area, including Maryland, Virginia and West Virginia, we are represented by the Rist showroom in the Washington Design Center.

1. **SCONCES** - When considering our interior sconces, measure the electrical box where you intend to place them. Many of our sconces were designed when the standard electrical box for sconces was 4" x 2 1/2" mounted vertically. Life is not so simple anymore, and if the sconce doesn't cover the electrical box, we can supply you with a thin metal cover plate that can be painted to match the wall.
2. **HANGING FIXTURES** – See below.

HANGING CHANDELIERS AND LANTERNS

O.A.H. means over all height, which is the distance from the ceiling to the bottom of the fixture.

As most of our fixtures hang from fixed stems, O.A.H. needs to be provided before delivery.

For fixed stem hung fixtures we also need to know if there is a cathedral ceiling, and if so the approximate slope of the ceiling.

Chandeliers over a table should be 30" to 34" above the table top. This can be moved up when hanging from very high ceilings.

Hanging fixtures requiring head room should be no lower than 6' 6" above the floor. Note: if there are oversized doors that might swing into the fixture.

Deep Landing Workshop supplies the hardware, including canopy and crossbar, required to mount to a standard electrical box.

Our "wireless" hook requires a rigid suspension rod. If it's exposed to wind, there will be work hardening and ultimately it will fail.
